(54) Title: **ENDOSCOPIC INSTRUMENT WITH TWO INDEPENDENT ARMS**

(57) Abstract: An endoscopic instrument (10), particularly useful for the non-invasive treatment of some digestive system pathologies, has a flexible and elongate main body (11) that houses a vision device (22) for taking images of an organ internal area, comprising a first working arm (21) for the use of tools, and further comprises a second working arm (23) for the use of tools apt to be operated independently with respect to said first working arm (21), allowing an endoscopic treatment of a wide range of pathologies that at present are treatable only surgically.
